GENERAL INFORMATION:

APPLICANT: Kimberly Anne Brun

APPLICANT: Richard James Chenery

APPLICANT: Richard James Chenery

APPLICANT: Harma Ellens

APPLICANT: John Anthony Feild

APPLICANT: Lin Yue

TITLE OF INVENTION: POLYNUCLEOTIDE AND POLYPEPTIDE SEQUENCES

TITLE OF INVENTION: ENCODING RAT MDR1B2 AND SCREENING METHODS THEREOF

FILE REFERENCE: GP-50008-D1

CURRENT APPLICATION NUMBER: US/09/450,105

CURRENT FILING DATE: 1999-11-29

EARLIER APPLICATION NUMBER: 09/120,513

EARLIER FILING DATE: 1998-07-22

NUMBER OF SEQ ID NOS: 2

The ABCtxH proteins are involved in disease-related transport processes, particularly in cancers and neuronal disorders. Antagonists of ABCtxH can be used to prevent or treat cancers or neuronal disorders e.g. Alzheimer's disease, amnesia, amyotrophic lateral sclerosis, bipolar disorder, catatoroia, cerebral neoplasms, dementia, depression, Down's syndrome, tardive dyskinesia, dystonias, epilepsy, Huntington's disease, multiple sclerosis, neurofirbomatosis, parkinson's disease, paranoid psychoses, schizophrenia or Tourette's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a human ATP-binding cassette transport protein (ABCtxH). The nucleotide sequence encoding ABCtxH was isolated from a human ovarian tissue cDNA library. Clones from the library were sequenced and used as query sequences against homology databases. ABCtxH encoding polynucleotides were extended using PCR. ABCtxH polynucleotides and polypeptides may be used for the diagnosis, prevention and treatment of conditions or disorders associated with the expression of ABCtxH, e.g. adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma, akathesia, Alzheimer's disease, amuesia, amyotrophic lateral sclerosis, bipolar disorder, catatonia, cerebral neoplasms, dementia, depression, Down's syndrome, tardive dyskinesia, dystonias, epilepsy, Huntington's disease, multiple sclerosis, neurofibromatosis, large parkinson's disease, paranoid psychoses, schizophrenia, and Tourette's

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is the human ABC-transporter-7 (HABC7) protein of the invention. HABC7 is an ABC transporter protein. The DNA, vectors containing it and recombinant host cells are useful for recombinant production of HABC7. The DNA, HABC7 and antibodies against HABC7 are useful as research reagents, for screening assays and in diagnostic assays. Antagonists and agonists of HABC7 can be used to inhibit or enhance, respectively, the activity of HABC7 or expression of the HABC7 coding sequence. Anti-HABC7 antibodies and HABC7 or its fragments can be used in vaccines. In particular, the proteins, antibodies, agonists and antagonists can be used for treating, e.g. cancer, autoimmune disease, Addison's disease, microsomal disorders and insulfi-dependent diabetes mellitus, related to both an excess and insulficient amounts of HABC7.

full-length cDNAs defined in the speciand/or diagnosis of the abnormality of full-length cDNAs for synthesizing polynucleotides, particularly the 5602 cDNAs defined in the specification, and for the detection osis of the abnormality of the proteins encoded by the

Claim 8; SEQ ID 11610; 2537pp G ROM; English

CC of an oligonucleotide comprising a sequence complementary to the sequence and an oligonucleotide comprising a sequence complementary to the computation of a polynucleotide which comprises a 5'-end cc polynucleotide which comprises a 3'-end sequence complementary to a cc polynucleotide which comprises a 1'-end sequence complementary to a cc oligonucleotide which comprises a 1'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers sets can be used in antisense therapy and cc in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the cc particularly full-length cDNAs. The primers allow obtaining of the full-length cDNAs of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and C AAH313631 to AAH13672 represent human antion acid sequences; AAB92446 to AAH13629 to AAH13629, all of which are used in the exemplification of the present invention. full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary. 529 to AAH13632 exemplification eotides and of. δ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic a genes from Drosophila interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               specification,

                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLG1616-ABL30511), expressed DNA sequences (ABLG1840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                  The sequence data for this patent did not form specification, but was obtained in electronic f at ftp.wipo.int/pub/published_pct_sequences.

CC expression system which can be used to express recombinant ATIL protein an CC expression system which can be used to express recombinant ATIL protein CC or a fusion protein comprising an immunoslobulin RC-region in a host C cell and an antibody immunospecific for the ATIL protein which can be CC used to stimulate or inhibit a function. This protein may have CC hypotensive activity and the sequences can be used in gene therapy or to CC develop a vaccine to treat diseases, including conditions where cellular CC redistribution and antigen presentation pathways are involved, such as CC disorders related to lipid metabolism and heavy metal transport, cystic Cibrosis, adrenoleukodystrophy, hyperinsulinaemic hypoglycaemia and CC hypertension. The nucleotide sequence is useful as a diagnostic reagent for detecting mutations in associated genes, in chromosome localisation constudies, and as a valuable tool for tissue expression studies. The CC screening methods for detecting the effect of added compounds on the CC screening methods for detecting the effect of added compounds on the CC screening methods for detecting the effect of added compounds on the CC suseful to identify membrane-bound soluble receptors.

                                                                                                                             CC The invention relates to human transporters and ion channels (TRICH)
CC polypeptides and their cDNA molecules. The nucleic acid and polypeptide
CC sequences are useful in the diagnosis, treatment, and prevention of
CC disorders associated with transport (akinesia, cystic fibrosis, Bell's
CC palsy, amyotrophic lateral sclerosis); neurological (Alzheimer's disease,
CC amnesia, dementia); muscle (cardinwyopathy, myocarditis, Duchenne's
CC asthma); cell proliferative disorders (cancers, leukaemia, psoriasis);
CC cardiac disease (angina, hypertension, or bradyarrythmia) and in the
CC cardiac disease, dangina, hypertension, or bradyarrythmia) and in the
CC assessment of the effects of exogenous compounds on the expression of
CC nucleic acid and amino acid sequences of transporters and ion channels.
CC The polynucleotides may be used to detect and quantify gene expression
CC disease, to generate hybridization probes for mapping naturally occurring
CC genomic sequence, and in drug screening. The present sequence is human
CC TRICH-1 protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cc atherosclerosis, macular degeneration, adrenoleukodystophy, prion cc diseases, Huntington's disease, Parkinson's disease and for treating cc mood and panic disorders. The nucleic acid is useful for expressing cc MaCB12, to detect ABCB12 transporter mRNA or genetic alteration in an cc ABCB12, transporter gene, and to modulate ABCB12 transporter activity and cc is useful in tissue-typing to identify individuals in forensic cc biology. The protein is useful as an immunogen to raise anti-ABCB12 cransporter antibodies and is used to screen for naturally occurring cc MaCB12 transporter substrates and to screen for drugs or compounds which cc modulate ABCB12 transport activity. The nucleic acid and protein are used co treat a subject having a disorder characterised by aberrant or cc unwanted ABCB12 transporter protein or nucleic acid expression or cc curvanted ABCB12 transporter protein and antibodies against ABCB12 are useful in screening assays, predictive medicine and in prophylactic and therapeutic treatment. The antibodies are useful to detect and isolate cc abcB12, regulate the bloavailability of ABCB12 and to modulate ABCB13 for a control of the machine and the modulate ABCB13 for acid is useful for transporter acityity. A vector expression of ABCB12 and to modulate ABCB13 for acidy is useful for transporter acityity. A vector expression of ABCB13 and to modulate ABCB13 for acidy is useful for transporter acityity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence represents a human ATP binding cassette (ABC) transporter family member, ABCB12. The nucleic acid encoding ABCB12 is useful as a target for developing modulating agents of multidrug resistance and as diagnostic and therapeutic tools to control cellular transport in cells of the brain and transport across the blood-brain-barrier and for developing strategies to deliver drugs to the brain, for treating Alzheimer's disease, hyperinsullinaemic hypoglycaemia, cystic fibrosis, alzheimer's disease, hyperinsullinaemic hypoglycaemia, cystic fibrosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          transporter activity. A vector expressing the nucleic acid is useful for producing non-human transgenic animals.

CC target for developing modulating agents of multidrug resistance and as CC diagnostic and therapeutic tools to control cellular transport in cells CC of the brain and transport across the blood-brain-barrier and as CC developing strategies to deliver drugs to the brain, for treating CC Alzheimer's disease, hyperinsulinaemic hypoglycaemia, cystic fibrosis, CC atherosclerosis, macular degeneration, adrenoleukodystophy, prion CC diseases, Huntington's disease, Parkinson's disease and for treating CC MBCB12, to detect ABCB12 transporter mRNA or genetic alteration in an CABCB12, to detect ABCB12 transporter mRNA or genetic alteration in an CABCB12 transporter young to identify individuals in forensic CC is useful in tissue-typing to identify individuals in forensic CC transporter antibodies and is used to screen for naturally occurring CC transporter antibodies and is used to screen for ratus or compounds which CC modulate ABCB12 transporte activity. The nucleic acid and protein are used CC to treat a subject having a disorder characterised by aberrant or CC unwanted ABCB12 transporter protein or nucleic acid expression or CC activity. The nucleic acid, protein and antibodies against ABCB12 are useful in screening assays, predictive medicine and in prophylactic and ctherapeutic treatment. The antibodies are useful to detect and isolate because the bioavailability of ABCB12 and to modulate ABCB12 cransporter activity. A vector expressing the nucleic acid is useful for cCC producing non-human transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated ABCB12
target for developing
diagnosis and therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20-AUG-1999; 99US-0161724.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         á
                                                                                                                                                                         glutamine-phosphororibosylpyrophosphate (PPRP) amidotransferase (ADE4) IMP-dehydrogenase (GUA1) and a GMP-synthetase (GUA2). The nucleic acid sequences encoding the enzymes involved in purine biosynthesis are used to genetically modify microorganisms, for the production of riboflavin. Riboflavin, also known as vitamin B2, is essential in humans and animals and is used to treat inflammation of the mouth and throat mucosal layer as well as inflammation in skin disorders. This sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Purine biosynthesis; phosphoribosylpyrophosphate synthetase; KPR1; KPR2 glutamine-phosphororibosylpyrophosphate amidotransferase; ADE4; GUA1; IMP-dehydrogenase; GUA1; GWP-synthetase; GUA2; PRPP synthetase; mouth; riboflavin; vitamin B2; treatment; inflammation; throat; mucosal layer;
                                                                                                                                                                                                                                                                                                                                  in Ashbya gossypii. The enzymes described in the invention in phosphoribosylpyrophosphate (PPRP) synthetases KPR1 and KPR2
                                                                                                                                                                                                                                                                                                                                                      This invention describes novel enzymes involved in purine biosynthesis in Ashbya gossypii. The enzymes described in the invention include
